Timeless Medical Systems Releases Version 3.0 of the Timeless Laboratory Information Management System

FOR IMMEDIATE RELEASE:

Charlottetown, PE, Canada – January 3, 2008 – Timeless Medical Systems today announced the release of the Timeless Laboratory Information Management System (LIMS) version 3.0.

The Timeless LIMS v.3.0 is a browser based and online comprehensive laboratory information management system for all laboratory disciplines. The Timeless LIMS is both HIPAA and FDA 510(k) compliant for maximum online security. This advanced system is built upon the latest scalable database foundation, incorporates customizable applications, supports multiple users in more than one geographic area with secure access to the data, and provides an intuitive and efficient workflow enabling fast and accurate turn around of results.

“Timeless Medical Systems is very pleased to announce the release of v3.0 of the Timeless Laboratory Information Management System,” stated John Rowe, President. “Version 3.0 allows any laboratory to manage all aspects of their operation internally and remotely from any computer or handheld device with an active internet connection. This browser based system is designed to be easily customized, intuitive to work with and provide state of the art security.”

The Timeless LIMS provides, for example, donor centers, hospitals or reference laboratories the ability to inventory blood or any other donated product from individual donors or an organization (such as Canadian Blood Services), manage transfusion patient data via the Timeless Portable Patient Record (Electronic Health Record/E.H.R.) technology and provide a means to track usage and report on that data at both the provincial/state and national levels. The Timeless LIMS also enables blood products to be reserved in advance for impending patient use and cross matched via Positive Patient ID ensuring that the assigned product is administered to the right patient.

The Timeless LIMS supports multiple, authenticated users which access a secure, encrypted centralized database of patient and product data. New records are entered into the Timeless LIMS either manually, by HL7 data import or by using a bar code reader. Existing patient and product records can be viewed and edited within the Timeless LIMS if the correct security level is applied. Patient, test, product and issue data can be archived for storage, as well as, maintained in the Timeless LIMS active database. Management reports and routines provide complex data querying and support a multitude of reporting options.

Timeless LIMS Features:

- Intuitive application GUIs and workflow
- Online access anywhere there is an active internet connection
- HIPAA and FDA 510(k) compliant for maximum online security
- Fully customizable screens and forms
- Easy administration of data security & user access
- Support for multiple laboratory departments
- Rapid data entry (and retrieval) by manual input, import or bar code reader
- Import and export to industry standard formats
- Fast reporting engine (ODBC compliant) with pre-defined and/or user created reports
- Automated data backup, cross reference and validation using check-sum
- Single install and multi-user client/server versions
- HL7 and XML standards compliant

About Timeless Medical Systems

Timeless Medical Systems develops advanced software applications, hardware and information technology systems for Healthcare Professionals. Timeless Medical Systems' products include wireless handheld computing patient systems, breast milk bar coding and tracking, statistical information gathering, reporting and management applications for Cancer Registrars and Oncology Departments, blood product inventory management and tracking systems for Blood Labs/Banks, comprehensive laboratory information management systems (LIS/LIMS) for all laboratory disciplines, sophisticated database systems and management tools, electronic health records (EHR/EMR) integration solutions, and data security, back-up and integrity systems.
