Prolacta Bioscience Employs Web Version of Timeless Laboratory Information Management System to Manage Collection and Distribution of Donor Breastmilk across USA

MONROVIA, CA & CHARLOTTETOWN, PE, September 20, 2005 – Prolacta Bioscience, a privately held company dedicated to ensuring the availability and highest possible safety of breastmilk for babies, has chosen the Timeless Laboratory Information Management System to manage the collection, tracking, testing, processing and distribution of donor breastmilk it receives from milk banks across the USA.

Prolacta will use the Web version of the Timeless Laboratory Information Management System, commonly known as a LIMS/LIS, to allow milk banks in any location and on any platform to securely and easily manage donors and their contributions online. The Timeless LIMS is a HIPAA and FDA 510(k) compliant laboratory management system which utilizes bar coding technologies for donor and specimen tracking ensuring the complete privacy and security of donor data.

“In our mission to achieve the highest possible safety of breastmilk for babies we required a LIMS which not only provides our milk bank partners with a simple, secure method for managing their donors, but also a robust, regulatory compliant technical environment in which to manage our internal operations,” said Elena Medo, CEO of Prolacta. “Our implementation of the Timeless LIMS ensures that our donors’ efforts result in the efficient collection, thorough testing, pasteurization, processing and rapid re-distribution of their donor milk to those babies who need it the most.”

The Timeless LIMS is a comprehensive laboratory information management system for all laboratory disciplines. The Web version of the Timeless LIMS is an advanced browser based system that is completely platform independent, built using the latest scalable database foundation, incorporates customizable applications and APIs, supports multiple users in more than one geographic area with secure access to the data, and provides an intuitive and efficient workflow enabling fast and accurate turn around of results.

“The Timeless LIMS architecture is designed to allow ease of customization to accommodate our clients’ individual needs while ensuring the security, integrity and regulatory compliance of their healthcare data,” stated Justin MacLeod, President of Timeless Medical Systems. “Prolacta’s implementation of the Timeless LIMS permits their milk bank partners and their staff to effectively and securely manage every step in the donor process from collection to distribution.”

About Timeless Medical Systems

Timeless Medical Systems develops advanced software applications, hardware and information technology systems for Healthcare Professionals. Timeless Medical Systems’ products include statistical information gathering, reporting and management applications for Cancer Registrars and Oncology Departments, blood product inventory management and tracking systems for Blood Labs/Banks, comprehensive laboratory information management systems (LIS/LIMS) for all laboratory disciplines, integrated communications systems, clinical speech diagnostic tools, sophisticated database systems and management tools, electronic health records (EHR/EMR) solutions, and data security, back-up and integrity systems.
